

# FAQ/HELP

*(Last updated 06.06.2022)*

## 1. What type of files are supported?

We support CSV (Comma-separated values) and TXT (Text) files that follow pattern:

<TICKER>,<PER>,<DATE>,<TIME>,<OPEN>,<HIGH>,<LOW>,<CLOSE>,<VOL>,<OPENINT>

e.g.

ALLT.US,D,20061115,000000,12,12,12,12,0,0

## 2. What are the available analysis methods options?

- **Plot chart** – prints the following 4 charts: candlestick chart, historical closing price chart, historical opening price chart, and historical volatility chart.
- **VAR** – *Value at Risk* – prints the probability of losing more than a given amount in a given portfolio.
- **CVAR** – *Conditional Value at Risk* – prints market risk or credit risk of a portfolio.
- **VIX** – *Volatility Index* – shows the market's expectations for the relative strength of near-term price changes of the S&P 500 Index (SPX).
- **Beta** – shows the measure of how an individual asset moves (on average) when the overall stock market increases or decreases.
- **Mean** – prints the average price.
- **Standard Deviation** – shows the dispersion of a dataset relative to its mean.

*Note: New methods might be introduced in future updates.*
